#### Payment notes

##### How PDCP HYDROGEN AUTOCALL works

- The payout of potential yield and nominal value of the PDCP HYDROGEN AUTOCALL depends on the market rate development of the underlying index – Solactive Hydrogen Selection AR 5%.
- For its duration the PDCP HYDROGEN AUTOCALL can be automatically paid out early per annum, if the value of the Solactive Hydrogen Selection AR 5% index at the observation date equals or is higher than the comparative value of the underlying index at the relevant observation date.
- If the automatic early repayment condition is not met, PDCP HYDROGEN AUTOCALL continues to the next date of possible repayment.
- If the PDCP HYDROGEN AUTOCALL is automatically repaid early, the investor shall receive its nominal value and a yield of 9% (see Note) for each year that elapsed since the issue date.
- If the automatic early repayment is not made and at the date of fixing the closing value of the observed index it does not fall below the barrier of 60% of its initial value, 100% of the nominal value of PDCP HYDROGEN AUTOCALL and the total yield of  $3 \times 9\% = 27\%$  shall be paid out at the maturity date (see Note).
- If the automatic early repayment is not made and at the date of fixing the closing value of the index the value of the observed index falls below the barrier of 60% of its initial value, at the maturity date of PDCP HYDROGEN AUTOCALL the 100% of its nominal value will be paid out minus the loss of the index as of the date of fixing its initial value to the date of fixing its closing value. The investor will lose more than 40% of the investment and the yield will not be paid out.

You will find more information in the leaflet.
